

Quantity Surveying

Arated Consulting understands that cost management (quantity surveying) is central to the integrated design process. By applying our extensive experience, we can help our clients to achieve the maximum return on their investment.

Concerns over economic stability and the short-to-medium term outlook for the construction industry reinforces the need for effective cost management, as project yields decline and volatility in the contracting market increases.

We work closely with clients at every stage of a project and define clear aims and objectives at the outset. This helps to ensure that the right decisions are made at the right time and implemented according to a set agenda.

We manage the supply chain using detailed, sector-specific benchmark data to mitigate risks throughout the project, from planning through to fabrication and installation. We consider all procurement routes and offer transparent accountability throughout.

From concept through to design, development, and construction, our professionals access and manage costs before a project reaches the marketplace, minimising the possibility for costly surprises.

Our cost experts work with you to prevent waste and maximized return on investment by providing meaningful cost information throughout the design process.
